

ScanCom Chosen as Gyro Bases Sole Manufacturer

Creating a Business Relationship That Synchronises Quality and Sustainable Choices

Scancom is pleased to announce it has won the sole manufacturing rights to [Gyro Bases](#). Gyro Bases design and market a range of self-stabilising table base products to the global indoor and outdoor furniture market. Hans Ilse, Director & Design Engineer at Gyro Bases commented, “Choosing Scancom to manufacture Gyro Bases was a natural fit. Both companies focus upon quality construction and sustainably sourced materials. We are excited that Scancom will be creating our products for us.”

Scancom is also excited to be manufacturing Gyro Bases and considers it a well designed and innovative product. Constructed from non-corrosive aluminium and incorporating a cleverly engineered self-stabilizing feature, it is obvious from the design of Gyro products that they will deliver long-term performance to purchasers. The self-stabilizing feature works to effectively rid the world of that age old and annoying problem of wobbly tables, and Scancom is proud to be assisting in the solution of that!

Aside from the self-stabilising feature, the table also has Fold-Flat technology that enables the whole table to be folded completely flat. This feature makes the table perfect for apartments or for pop-up occasions where the table can be stored away after use without taking up valuable space. The Gyro table base has a choice of metal finishes and the table top comes in a range of colours in hardwood or bamboo.

Gyro Bases are located in Perth, Western Australia and so are geographically located in the global region of our Vietnam manufacturing plant. Scancom will soon roll out the first production of Gyro

table bases in preparation for distribution. With this in mind, Scancom have invited Gyro Bases to join us at [Spoga+Gafa](#), **Cologne Germany from 30 August to 1 September 2015; ScanCom booth G040/H041, Hall 3.2.**, where you can get “hands on” with their products, see the quality manufacturing and experience the self-stabilising and fold-flat features for yourself.

About Scancom

ScanCom is a leading furniture manufacturer, making outdoor furniture in hardwood, teak, painted wood, aluminium, steel and wrought iron, as well as cushions, parasols and a new indoor furniture range. ScanCom has seven subsidiaries located on three continents, with production operations in Vietnam, Indonesia and Brazil, as well as sales offices in the UK, Germany and the US. The company employs up to 5,000 people directly and creates approximately 8,000 jobs at subcontractors. ScanCom is recognised for setting the highest environmental standards in the industry.
